

Virtual production made easy

**QIMERA** is a real-time virtual production compositing tool that allows you to create the most advanced virtual sets and augmented reality graphics on the market.

It was developed and designed with today's production workflow in mind with an easy and intuitive user interface, where any NLE editor can easily operate the system in no time.

*Intuitive and easy to use*

*Weather system*

*Tracking, trackless and mixed functionality*

*Lighting control with DMX IP*

*Integration with PTZ Camera with free-D*

*3D assets library*

*High quality Keyer*

*Realistic graphics with Unreal Engine 4.27*

*Multi-layer composition*

*Data driven graphics*

*Virtual crane (Virtual JIB)*

## Weather it

Is a real time weather system that enables you to make immersive weather reports with rain, snow, tornados, hurricanes and more. **Weather it** can be connected with weather services via json or xml.

## Ray Tracing

Increased realism on sets with enhanced shades, reflections and shadows.

## 3D Charts

Graphic tool enables the creation of bar graphs, pie charts, maps and more with data import from CSV or JSON files.

## Inside Game

Is a digital, sports 3D tactic board for sports commentators. Inside game will bring team formations, players spotlights, play tracing and play analysis, control the game from a tablet or smart phone with amazing augmented reality assets.

## Virtual Shadows

Create virtual shadows of the subject in the surrounding area when using out trackless virtual Qimera shots without the need of a tracking system.

## Flight Cam

Flight Cam is a virtual drone or cable cam that enables amazing camera movements on the live production set.
